EDUCATION

Stony Brook University

Expected May 2028

B.S. in Computer Science, GPA: 3.73

Stony Brook, NY

- **Relevant Coursework:** Systems Fundamentals, Data Structures, Graph Theory, Linear Algebra
- **Extracurriculars:** Game Development Club, Computing Society, Robotics Club, Hall Council (Secretary)
- **Honors:** Dean's List, University Scholars Program

EXPERIENCE

Cybersecurity Research Assistant

August 2025 – Present

Ethos Lab Group, Stony Brook University

Stony Brook, NY

- Assisted in developing and deploying honeypot templates using tools such as Python, Apache, and AWS to capture and analyze automated bot traffic.
- Performed Python data analysis on 8 months of JSON log data to extract behavioral patterns, HTTP/TLS fingerprints, and attack indicators.
- Contributed to ongoing research on bot fingerprinting and detection, evaluating browser, network, and behavioral signals to improve identification of malicious automated clients.

Linear Algebra Teaching Assistant

August 2025 – Present

Stony Brook University

Stony Brook, NY

- Held 3 hours of weekly office hours, assisting 5+ students with homework and concepts
- Assisted with proctoring exams and grading homework assignments for 100+ undergraduate students, providing constructive feedback to students
- Aided in grading 100+ student midterm exams, checking for scoring accuracy and posting scores online

Programming & Gaming Instructor

October 2024 - June 2025

TD3 Innovative Gaming

Long Island, NY

- Conducted 2 hour monthly sessions teaching 10+ K-8 students math and programming topics
- Maintained a positive attitude towards learning and motivated students to develop a passion for learning in an exciting and engaging environment through video games and other interesting mediums

PROJECTS

NYC Urban Heat Island Analysis | HTML/CSS, Javascript

October 2024

- Created an informative website explaining and visualizing NYC's urban heat island issue and its disproportionate impact on vulnerable populations with HTML, CSS, Javascript, and QGIS
- Utilized QGIS and open-source datasets (Landsat-8 satellite imagery and Census data) to map the correlation between the Normalized Difference Vegetation Index (NDVI) and Land Surface Temperature (LST) in NYC
- Performed statistical analysis to analyze the association between variables using bilinear interpolation, linear regression models, chi-squared tests, and t-tests

Low-Level Systems Engineering | C

September 2025

- Implemented a fully functional dynamic memory allocator (malloc, free, realloc) in C for x86-64 using segregated free lists, boundary tags, and 16-byte alignment.
- Built a multi-process game engine using fork/exec, bidirectional pipes, a custom I/O protocol, a minimax-based iterative deepening search, and POSIX signal handling.
- Developed a concurrent currency/security exchange platform using multithreading, semaphores, condition variables, and deadlock-free order matching.

TECHNICAL SKILLS

Languages: Java, Python, C, JavaScript, HTML/CSS

Frameworks: React, Express.js, Node.js, MongoDB

Developer Tools: Git, Bash, Linux, AWS, Postman, Elasticsearch (ELK Stack)
